What is Alkaline Ionized Water?

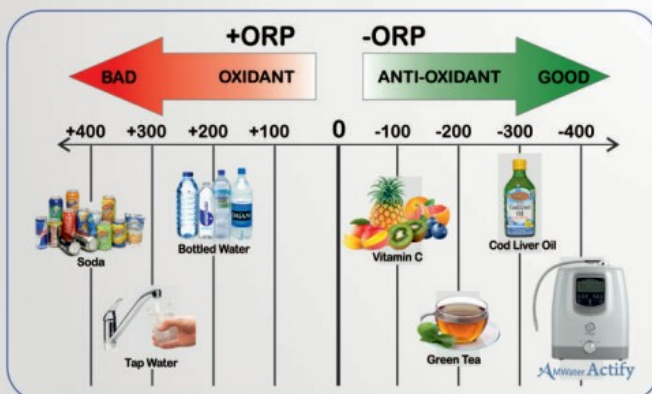

There Are Many Alkaline Waters Available In the Market But Most Of them Are Not Ionized. Ionized Means that the Water Has A High Concentration Of Antioxidants Which Provide the Health Benethts. Alkaline Water Can Be Made From Inorganic Salts But True Alkaline Ionized Water Can only be Made Using Electrolysis.

What is pH?

pH Stands For **Potential Of Hydrogen**. It Measures the Acidity Or Alkalinity Of Liquids. The pH scale ranges from 1 (most acidic) to 14 (the most alkaline). A pH Of 7 Means that the Liquid Is Neutral, Neither Acidic Nor Alkaline. **Our Blood Has A Natural Alkaline pH Of 7.36**. Most tap water has a pH around 7, which is neutral, although it can vary slightly in either direction. **Alkaline water have a higher pH** - usually between 8 and 10. The Fast Food Diets Of the 21st Century Are Slowly Destroying Our Health By Making Our Body Acidic, Which Leads To Serious Diseases.

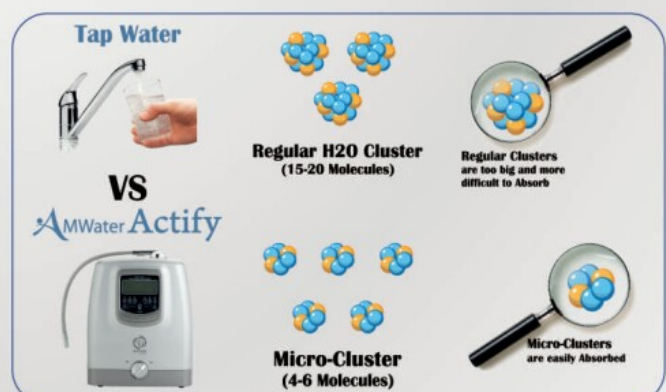

What is ORP?

ORP Stands For Oxidation Reduction Potential - It Measures the Antioxidant Quality Of Substances. Lower ORP increases Antioxidant Content. Antioxidants Protect Us From Oxidative Stress & Damage Due To Free Radicals From Acidic Diets. Amwater Actify Alkaline Water Ionizers offers ORP of upto -800mV

What is Micro-Cluster?

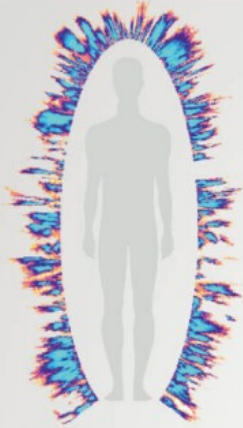

Amwater Actify makes water "micro-clustered" so it will be more quickly and easily absorbed and will hydrate cells and tissues more effectively. Super-charged hydration. Amwater Actify Alkaline water contains only 5 to 6 water molecules per cluster while conventional water contains 15 to 20 water molecules per cluster. Small molecular clusters mean better hydration in a fraction of the time.
